Foreword

This document complies with the provisions of GB/T 1.1-2020 "Standardization Work Guidelines Part

1.Structure and Drafting Rules of Standardization Documents". Drafting. This document replaces GB 14749-2006 "Safety Requirements for Baby Walkers". Compared with GB 14749-2006, the only changes are structural adjustments and editing. Aside from the sexual alterations, the main technical changes are as follows:

a) The terms "base", "parking device", and "braking device" have been added (see 3.4, 3.6, and 3.7);

b) Added limits for "plasticizers", "formaldehyde", "decomposable harmful aromatic amine dyes", "pH", and "migratable N-nitrosamines". Limits for N-nitrosamine precursors, limits for short-chain chlorinated paraffins, and limits for formaldehyde, benzene, toluene, xylene, and total volatile organic compounds. Technical requirements and test methods for "TVOC

- (Total Volatile Organic Compounds) emission levels" (see 4.1.4~4.1.10, 5.4~5.9);
- c) Added technical requirements for the locking mechanism in the locking, folding, and frame adjustment devices (see 4.3.7);
 - d) Change "clamping, shearing" to "rigid moving parts" (see 4.3.8, 2006 version 4.3.8);
 - e) The width requirements for the crotch strap have been changed (see 4.3.9, 2006 version 4.3.9);
 - f) The technical requirements and test methods for the anti-collision distance when using push handles on baby walkers have been changed (see 4.3.12 and 5.15, 2006 edition).
 - g) Added technical requirements and test methods for "stickers and labels" (see 4.3.13);
 - h) Added technical requirements and test methods for "staircase rollover protection" (see 4.3.14);
 - i) Added technical requirements and test methods for "parking devices" (see 4.3.15);
 - j) Electrical performance safety requirements have been added (see 4.13);
 - k) The testing method for "Dynamic Stability" has been changed (see 5.17, 2006 version 5.17).

1 Scope

GB/T 14749-2025 is the Chinese national standard on safety of child care articles - baby walking frames, in the field of domestic and commercial equipment, entertainment, sport. The /T suffix marks it as a recommended standard: it is not compulsory by itself, but it becomes binding as soon as a contract, a tender or a customer specification calls it up - which in practice is how most foreign buyers meet it. It was issued on 5 October 2025 by the State Administration for Market Regulation; Standardization Administration of China, and takes effect on 1 November 2026. Classification: ICS 97.190, CCS Y 57. This page is published from the official record of the standard held by the Chinese standards administration: the identification, the dates, the classification and the issuing body are taken from there. The clause text, the tables and the numeric limits are in the document itself, which is delivered complete in English translation.

This document specifies the baby walkers (hereinafter referred to as walkers) for use by infants from the stage where they can sit up until they can walk independently. The safety requirements are described, along with the corresponding testing methods. This document does not apply to medical walkers or walkers with air cushion support for infants. Baby walkers that come with toys for children to play with are subject to toy standards.

2 Normative references

The contents of the following documents, through normative references within the text,

constitute essential provisions of this document. Dated citations are not included. For references to documents, only the version corresponding to that date applies to this document; for undated references, the latest version (including all amendments) applies. This document.

GB/T 2912.1 Textiles-Determination of formaldehyde-Part

3 Terms and Definitions

The following terms and definitions apply to this document.

3.1 babywalking frame A seat frame that can move on casters allows the baby to move in any direction with the support of the frame after sitting in the stroller. Examples. circular and folded structures (see Figure 1).

4 Migration of Certain Elements

GB/T 9754 Determination of gloss at 20°, 60° and 85° for paints and varnishes

GB/T 17592 Determination of prohibited azo dyes in textiles

GB 18401 National Basic Safety Technical Specifications for Textile Products

GB/T 19865 Safety of Electric Toys

GB/T 19941.1 Determination of formaldehyde content in leather and fur - Part
