What this standard covers

This standard specifies the silver halide photographic light-sensitive material is generally measured, using simulated sunlight exposure incandescent light source and a common test technical requirements. This standard applies to the performance of photographic film and photographic photosensitive material determination for the use of other sources of exposure of the photosensitive material can also be implemented by reference. This standard does not apply to radiographic film, aerial film and special class of non-tungsten lamp light source (such as a laser, fluorescence) other photosensitive material exposure.

Document data

International classification (ICS): 37.040.20.

Chinese classification (CCS): G80.

Estimated length of the Chinese original: 11,115 words.

Adopted international standard: ISO 7589-1984, NEQ; ISO 5800-1987, NEQ.
