What this standard covers

This standard specifies: catalog provides the OSI application process, OSI management processes, other OSI layer entities, and remote communication services required directory capabilities. It provides the ability to include: " user-friendly name ", that object can fit in the memory of the human user name is referenced (although not all objects need to have a user -friendly name), " mapping between the name and the address. ", which allows objects with their position dynamically binding. For example, after a capability allows the OSI network can be " self-configuring ", when to add, delete, and update the location of the object, it will not affect the operation of OSI network. Is not a directory with a general-purpose database systems, although it can be built on top of such a system.

Document data

International classification (ICS): 35.100.70.

Chinese classification (CCS): L79.

Estimated length of the Chinese original: 28,251 words.
