What this standard covers

This standard provides extremely useful application in the directory object classes and a number of names (called) format. Object class is defined to include: Gives attributes associated with the class object type list. Name (called) format is defined to include: name it application object classes, and lists the object for the class to use for naming attributes. Public authorities use these definitions, and is responsible for the management of directory information. Any public administration institutions may need to define their own object class or sub-class and name (called) format.
