### What this standard covers

This standard specifies the characteristics and methods of measurement MIDAS of pressure pulse lithotripsy machines. The measured parameters can be used to the sound output device such announcement. This standard applies to the introduction of pressure waves from outside the body and focus the energy of mechanical lithotripsy medical equipment, not for Percutaneous lithotripsy and laser lithotripsy device type. This standard was developed for extracorporeal lithotripsy machine. In other medical applications of the pressure pulse treatment, as long as not other specific valid standards, the standards can also be used as a guide.

### Document data

International classification (ICS): 17.140.

Chinese classification (CCS): A59.

Estimated length of the Chinese original: 20,220 words.

Adopted international standard: IEC 61846-1998, IDT.

Supersedes the earlier edition GB/T 16407-1996.
