What this standard covers

This standard specifies the compression test methods for metallic bearing material. Compression tests specified in this standard apply to the cross-sectional sample compressed uniformly distributed load acting in the axial direction, the determination of compression properties of metallic materials. To this end, the slow, continuous pressure on cylindrical specimens with the original cross-sectional area $S(0)$, and measure the pressure exerted.

Document data

International classification (ICS): 21.100.10.

Chinese classification (CCS): J12.

Estimated length of the Chinese original: 8,844 words.

Adopted international standard: ISO 4385-1981, MOD.
