What this standard covers

This standard applies to the following two conditions: a) CCITT X. 31 runs according to a TE1 or TE2 is connected to the ISDN packet processor via a packet arrives ISDN network access unit to exchange data; b) using ISDN circuit-switched channel when, TE1 and (or) TE2/TA directly connected to each other (ie, terminal run by DTE/DTE mode). This standard does not involve the use of ISDN circuit-switched channel and the terminal run by DTE/DTE mode when using the TA on the R reference point to access the TE2 (see CCITT X. 613 or ISO/IEC 10588).

Document data

International classification (ICS): 35.100.30.

Chinese classification (CCS): L78.

Estimated length of the Chinese original: 18,198 words.

Adopted international standard: ISO/IEC 9574-1992, IDT.
