What this standard covers

This standard specifies the Remote Operations Service (ROS), the service uses Abstract Syntax Notation (ASN. 1) to define the basic concepts of ROS corresponding information object class, but also provides a provision to allow the application designer particular instances of these classes notation. This standard also provides for a number of definitions to define the concept of communicating with ROS generic protocol between objects. These definitions are used in this standard in order to provide ROS partner criteria used in the implementation of the OSI protocol data unit, service primitives and application context definition. This standard also ROS -based application provides a common utility designers some definitions. This standard does not specify conformance requirements.

Document data

International classification (ICS): 35.240.20.

Chinese classification (CCS): L79.

Estimated length of the Chinese original: 43,432 words.

Adopted international standard: ISO/IEC 13712-1-1995, IDT.
