### What this standard covers

This standard specifies the relationship between the operation of the machine direction and the direction of movement of the control device and the corresponding machine between moving parts. This standard applies to the machine, such as handles, hand wheel and button controls. This standard does not apply to machine tools for continuous operation under normal operation of the components in the same direction control device.

### Document data

International classification (ICS): 25.08.

Chinese classification (CCS): J50.

Estimated length of the Chinese original: 5,542 words.

Adopted international standard: ISO 447-1984, MOD.
