What this standard covers

This standard specifies requirements and gives guidelines. Nothing to do with the system used to generate one or more OSI conformance test suite specification. In particular, it applies to generate all OSI conformance testing specifications, including those of all the draft versions of compliance test specification. This section applies to generate abstract test cases, the abstract test case through the control and observation protocol behavior, in accordance with the relevant static and/or dynamic conformance requirements to achieve consistency checking. Abstract test methods included in this section can be used to define virtually any test cases, test cases that can control and observe the protocol data unit ((PDUs) and abstract service primitives (ASPs) to abstract expression. Certain agreements Although the test case is needed, but can not use this phrase to express the test cases. this test case itself may need to be included in the conformance test specification, but this test case specification beyond the scope of this section.

Document data

International classification (ICS): 35.100.

Chinese classification (CCS): L79.

Estimated length of the Chinese original: 38,393 words.

Adopted international standard: ISO/IEC 9646-2-1994, MOD.
