What this standard covers

This standard specifies the coded representation to provide high-quality audio and high-quality audio signal decoding method of storage media. Input of the encoder and the decoder outputs are compatible with the standard PCM, such as standard digital audio tapes and compact discs. This standard is to 1. 5Mbit/s data, providing continuous audio and video data streams, such as CD, DAT and hard disk storage media for the application. A storage media may be directly connected to the decoder can also use other means, such as through a communication line, or GB/T 17191. 1 defined GB/T 17191 multiple data mode and the decoder is connected. Use the standard sampling rate 32kHz, 44. 1kHz and 48kHz.

Document data

International classification (ICS): 35.04.

Chinese classification (CCS): L71.

Estimated length of the Chinese original: 146,180 words.

Adopted international standard: ISO/IEC 11172-3-1993, IDT.
