What this standard covers

This standard applies to both onshore and offshore industrial process measurement and control systems and their components in the work force during the acceptance limits. This section does not consider the maintenance and repair conditions. This section also does not consider fire and explosion hazards directly related to working conditions and conditions relating to nuclear radiation. Considered in this section is limited to the amount of influence that may directly affect the amount of process system performance. Specific working conditions impact on staff does not belong to the scope of this section. This section only consider these conditions, and these conditions the impact of the meter unit is not in consideration. This section lists the operating conditions to determine the limits or groups limit. Other conditions of work, including those difficult to identify and measure the characteristics of the working conditions and the presence of not yet known by the working conditions of the applicable standards of other publications. Corrosive atmosphere is difficult to determine an example of working conditions, types of corrosive substances as weigh more, different concentrations, and a combination of substances that might be encountered in various forms its classification is difficult.

Document data

International classification (ICS): 25.040.40.

Chinese classification (CCS): N10.

Estimated length of the Chinese original: 10,176 words.

Adopted international standard: IEC 60654-2-1979, IDT.
