What this standard covers

This standard specifies the conditions under urban driving car noise measurement methods. This measuring method is now under heavy random attempt, using the transmission intermediate gear (gear) in urban traffic conditions, only in the total running time of more than 5% of the noise level, noise level and such cars in urban driving conditions equivalent continuous a-weighted emission sound pressure level L (A) (e) (q). (T) has a good correlation. This standard applies to urban driving force sedan.

Document data

International classification (ICS): 13.14.

Chinese classification (CCS): Z32.

Estimated length of the Chinese original: 9,949 words.

Adopted international standard: ISO 7188-1994, MOD.
