What this standard covers

This standard specifies the tin content in the range of 50% to 70% (by ??mass) of tin - Technical requirements and test methods for lead alloy plating layer (see 10. 3). This standard applies to the electronics, electrical products and other metal products to prevent corrosion and improve weldability tin - lead alloy plating layer. This standard also applies to other components of tin - lead alloy plating layer, but should pay attention to the above alloy composition may range performance of these coatings tin - lead alloy plating different. The standard classification clear that the base metal type and amount of coating composition containing tin certain range, as well as hot-melt layer and the light of the provisions of the deposited layer.

Document data

International classification (ICS): 25.220.40.

Chinese classification (CCS): A29.

Estimated length of the Chinese original: 14,174 words.

Adopted international standard: ISO 7587-1986, MOD.
