What this standard covers

This standard specifies test methods for measuring dynamic surface position of the V-belt section. Couplet V-belt and pulley with multi-slot, the section plane line position to effectively represent the difference Δe (see Figure 1). On a single V-belt and pulley with single slot, it is possible to effectively position the section plane line represents the difference Δe (see Figure 1), it is possible to represent the baseline difference Δd (see Figure 3). Hexagon with a single V-belt can handle.

Document data

International classification (ICS): 83.140.01.

Chinese classification (CCS): G42.

Estimated length of the Chinese original: 6,638 words.

Adopted international standard: ISO 8370-1-1993, IDT.
