What this standard covers

This standard specifies: a) primitive action and event services; b) associated with each primitive action and event parameters, and the form they take; c) the relationship between these actions and events and their effective order. The main objective of this standard is to define the characteristics of the data link service concept, the supplementary guidance in the development of the OSI reference model data link protocol aspects. This standard specifies neither the various implementations or products, nor to limit the data entity and an information processing system of the link interface. The data link service definition standard no device conformance requirements. Instead, consistency is achieved by compliance with the data link protocol implementation to achieve these agreements meet the criteria defined in the data link services.
