What this standard covers

This standard specifies the determination of protective fabric by taking a metal droplet impact heat-resistant properties. This standard applies to all kinds of anti-spatter of molten metal burns the body fabric and composite fabrics. This method can be used to compare the performance difference between heat under the same conditions of various fabrics. This standard does not apply to affect the determination of a large volume of molten metal, and can not predict the performance of protective clothing against heat in other industrial conditions.

Document data

International classification (ICS): 13.340.10.

Chinese classification (CCS): W04.

Estimated length of the Chinese original: 11,190 words.

Adopted international standard: ISO 9150-1988, MOD.
