What this standard covers

This standard specifies the electrical and electronic equipment in the frequency range of 0 ~ 150Hz, for the common-mode conduction disturbance immunity test requirements and methods. The purpose of this section is to establish electrical and electronic equipment when subjected to common-mode conducted emission test and repeatability general guidelines. This section applies to the power port, control/signaling and communication ports.

Document data

International classification (ICS): 33.100.

Chinese classification (CCS): L06.

Estimated length of the Chinese original: 18,113 words.

Adopted international standard: IEC 61000-4-16-2002, IDT.
