What this standard covers

This standard specifies the use of direct shear apparatus geotextiles and related products with the standard method for determining the frictional characteristics of sand. This standard applies to all geotextiles and related products. When the rigid base geogrid test, the friction between the base and the result of this is not necessarily true, and the sample response geotextile friction between the base correction.

Document data

International classification (ICS): 59.080.70.

Chinese classification (CCS): W59.
