What this standard covers

This standard specifies a partial discharge inception voltage measurement test procedures. The program is a recently developed, used to describe a group of test method of insulating liquids under high electrical stress changes in the performance of one. This standard applies to all types of insulating liquids used in medium and high voltage electrical equipment. However, the device described in this standard may not apply to liquid PDIV value greater than 70kV, see Appendix A.

Document data

International classification (ICS): 29.035.01.

Chinese classification (CCS): K15.
