What this standard covers

This standard specifies the 90mm modified frequency modulation recording at a density of 31, 831 flux transitions/rad, 80 tracks on each side of the performance, this is defined as the GB 303 floppy disk type. This standard specifies the floppy disk mechanical, physical and magnetic properties, so that the data processing system provides a physical exchange between the possibilities. This standard specifies the recording method, recording signal quality, the track configuration and track format. With GB/T 13703 together with the standard data processing system to provide data exchange between all the conditions.

Document data

International classification (ICS): 35.220.20.

Chinese classification (CCS): L64.

Estimated length of the Chinese original: 34,389 words.

Adopted international standard: ISO/IEC 10994-1992, IDT.
