What this standard covers

This standard defines a mechanism that allows OSI layer (all session, presentation and application entities) in the Internet Transmission Control Protocol (TCP) over the operation, without knowing that they are running on TCP/IP interconnection line. It provides with ISO/IEC transport protocol class 4 similar functionality. It does not provide Internet gateway between applications and OSI facilities.

Document data

International classification (ICS): 35.100.01.

Chinese classification (CCS): L79.

Estimated length of the Chinese original: 6,642 words.

Adopted international standard: ISO/IEC 14766-1997, IDT.
