What this standard covers

This standard specifies the metal coating layer revealed through single or multi- layer covering accessibility silver, copper or copper alloy matrix and pore discontinuous method. This method is particularly suitable for reducing the sulfur atmosphere obvious discoloration or a combination of the various single cover layer, for example: gold, nickel, tin, tin lead, palladium and alloys thereof. This test method is designed to show the cover layer can be determined whether the user acceptance porosity level requirements. Porosity values ??generally required application by the user intends to acceptable levels determined empirically.

Document data

International classification (ICS): 25.220.01.

Chinese classification (CCS): A29.

Estimated length of the Chinese original: 10,157 words.

Adopted international standard: ISO 12687-1996, IDT.
