What this standard covers

This standard specifies the programming language and software interfaces in general terms a number of data types and shared semantics, called independent language (LI) data type. This standard stipulates that the defined without reference to other data types primitive data types, but also provides non- primitive data types, rather than the primitive data types in whole or in part by other data type definitions. This standard specifies only data type description is " language-independent ", ie the type of data required by data type class for programming languages ??and other needs of the concept of entity data types of the actual data type is a specific instance.

Document data

International classification (ICS): 35.060.

Chinese classification (CCS): L74.

Estimated length of the Chinese original: 100,190 words.

Adopted international standard: ISO/IEC 11404-1996, IDT.
