### What this standard covers

This standard defines the text used in communications and control functions required for coded representation. Second page image format text provides the control functions. Title III requirements have been formatted text can be formatted with the control functions. These control functions are derived from the GB/T 5261, but there are two exceptions. This standard definition of control functions, in general, more than GB/T5261 the corresponding definition more specific. This standard specifications for graphic characters and control functions in binary coded form text exchange, but not for the actual processing of the text. Text and graphics are generally composed of characters, but this standard only applies to characters of text. This standard defines the encoding that is designed for embedded communication control functions related texts situation, rather than for control functions separated from the text but as a communication protocol elements and so on. This standard does not define the communication process control required control functions.

### Document data

International classification (ICS): 35.040.

Chinese classification (CCS): L67.

Estimated length of the Chinese original: 39,336 words.

Adopted international standard: ISO/IEC 10538-1991, IDT.
