What this standard covers

This standard specifies the build data and metadata defined requirements and recommendations. This section describes only semantic definition, regardless of the defined format. Especially when used in Section 3 GB/T18391 metadata specified the contents of the registration system, can be used to determine the definition of the data and metadata. These requirements and recommendations for the formation of data elements and other data types defined diagnostic pieces, where the data component type can be entity types, entities, relationships, attributes, object type (or class), objects, composites, code entry, Yuan data items, as well as the data referenced by the XML tags

Document data

International classification (ICS): 35.040.

Chinese classification (CCS): A24.

Estimated length of the Chinese original: 12,113 words.

Adopted international standard: ISO/IEC 11179-4-2004, IDT.

Supersedes the earlier edition GB/T 18391.4-2001.
