### What this standard covers

This standard defines the functional size measurement of important concepts, describing the application of the general principles of FSM methods. For the following activities, the standard does not provide detailed information on how the rules for: a method using a specific amount to the software side of the functional size, used by the particular method results, select a particular method. This standard can be used to determine a method to measure whether the software size is the FSM method.

### Document data

International classification (ICS): 35.080.

Chinese classification (CCS): L77.

Estimated length of the Chinese original: 9,977 words.

Adopted international standard: ISO/IEC 14143-1-1998, IDT.
