What this standard covers

This standard specifies: Determination of rubber and fabric adhesive strength under direct tension methods. This standard applies to: uniform thickness, flat or with enough flexible, low under pressure can be kept flat tested material. This standard is particularly suitable for rubber layer is very thin, it is difficult to test with the test strip method or stripping method materials. It should be noted, obtained by this method experimental results and with GB/T 532 "vulcanized rubber, thermoplastic rubber and fabric adhesive strength determination" as stipulated peel test method obtained results are not necessarily related.

Document data

International classification (ICS): 59.080.40.

Chinese classification (CCS): G40.

Estimated length of the Chinese original: 5,545 words.

Adopted international standard: ISO 4637-1979; IDT.
