What this standard covers

This standard specifies: Determination of nickel-containing flame original jewelry (including non-precious metal jewelry) in the nickel content in absorption spectrometry Determination. This standard is particularly applicable to the nickel content of 0.03% 0.07% samples of nickel determination. The criteria used to determine the insertion or human ear any other parts, removed or retained in the wound healing process perforations products, overall mass of nickel by.

Document data

International classification (ICS): 39.060.

Chinese classification (CCS): Y88.

Estimated length of the Chinese original: 10,164 words.

Adopted international standard: EN 1810-1998; MOD.
