What this standard covers

This standard specifies: drilling for oil and gas industry, oil and pipeline equipment carried the life -cycle cost analysis to develop and use relevant regulations. This standard describes Life cycle cost analysis method can be used with multiple fee structure or asset status plan to make decisions, in order to measure the program among the candidates the cost differences. This standard basic methods, applicable to all Assets decisions, But the process of planning and management the extent depending on the assets involved the number and can produce the potential value. This approach making new investment decisions when the project is also of great value, It also provides identification of key cost factors and the way these factors the cost control mechanisms, facilitate effective be cost control, be optimized throughout the asset life process. This standard the scope is limited to the life -cycle cost analysis. The portion of the device to determine the individual the life cycle cost has little to do, But after this process to determine the asset life for all costs associated with this device is very necessary -.

Document data

International classification (ICS): 75.180.01.

Chinese classification (CCS): E92.

Estimated length of the Chinese original: 16,156 words.

Adopted international standard: ISO 15663-1-2000; IDT.
