### What this standard covers

This standard applies to the use of fiber optic communication lines lightning protection. The goal of this section is to specify the installation conditions, the fiber optic cable on the number of failures that may occur mainly limited to less than or equal to the limit, the limit is defined as the frequency of the main fault tolerance. This section presents the main fault could calculate the number of options feasible protection measures and analyzes the frequency of the main fault tolerance method.

### Document data

International classification (ICS): 33.040.50.

Chinese classification (CCS): M42.

Estimated length of the Chinese original: 29,265 words.

Adopted international standard: IEC 61663-1-1999, IDT.
