### What this standard covers

This standard specifies the various noise sources for shielding outdoor sound barrier insertion loss measurement method. It details the insertion loss of outdoor noise barriers of field measurement process, including the microphone position of the sound source conditions and measurement locations acoustic environment. This standard for people used to measure a given location and weather conditions sound barrier insertion loss. It can not compare the same one installed in a different location sound barrier insertion loss values. But it can be the direct method to compare the same location under certain meteorological conditions different types of sound barrier insertion loss values.

### Document data

International classification (ICS): 17.140.01.

Chinese classification (CCS): Z32.

Estimated length of the Chinese original: 13,188 words.

Adopted international standard: ISO 10847-1997, IDT.
