What this standard covers

This standard specifies: with a certain amount lining layer of gravel to measure wear hose through the hose methods. This standard specifies the method is applicable to an inner diameter of 20mm ~ 50mm for sandblasting, shot blasting and similar operations Rubber and plastic hoses. This standard specifies the method can be used to compare different types of hose wear, but not for the provisions of the standard maximum wear hose. Be on the same type and size hoses for comparison. With different models gravel test results are not comparable.

Document data

International classification (ICS): 83.140.40.

Chinese classification (CCS): G42.

Estimated length of the Chinese original: 6,670 words.

Adopted international standard: ISO 7662-1988; IDT.
