What this standard covers

This standard specifies the slope method, hanging pendulum method and pour plate method three kinds of method for measuring friction of filled sacks. The slope of the standard method for the determination of stacking layers of filled sacks between the friction coefficient, hanging pendulum method and pour plate method for the determination of the friction properties of individual bags

Document data

International classification (ICS): 55.020.

Chinese classification (CCS): A83.

Estimated length of the Chinese original: 1,015 words.

Adopted international standard: ISO 15119-2000, IDT.
