What this standard covers

This standard applies to the determination of flash point not less than 38°C middle fraction of particulate matter content of the fuel, does not apply to the determination of light distillate fuel or jet fuel. The limits for diesel engines and particulate content of the middle distillate fuel for civilian, filter clogging can be prevented, and other operational problems. This standard measurement range of not more than 25g/m³. Only in strict accordance with the standard terms determination. In particular membrane material, completely filtered sample volume and sample are in line with the provisions of this standard, the precision of the standard is valid.

Document data

International classification (ICS): 75.160.20.

Chinese classification (CCS): E31.

Estimated length of the Chinese original: 9,993 words.

Adopted international standard: ISO 15167-1999, MOD.
