What this standard covers

This standard specifies the network instrument protocol, which can be used for TCP/IP based network communications between controllers and devices. The only direct reference to the specification of the network is to support the Internet Protocol network group. As defined in this specification techniques can be applied on other networks, but this article does not address the underlying transformations. This specification using the Internet Protocol Suite Upper Open Network Computing Remote Procedure Call, ONC/RPC protocol on the network only as a protocol specification to use, does not specify a particular application interface. Network Instruments host can support other network protocols.

Document data

International classification (ICS): 17.220.

Chinese classification (CCS): N20.

Estimated length of the Chinese original: 41,462 words.
