What this standard covers

This standard applies to liquid chemicals at atmospheric pressure in a container to be heated uniformly hot flame, cold flame ignition temperature determination. This standard applies to measure and describe the raw materials, products in the test chamber under controlled conditions, the reaction after heat or flame, and can not be used to evaluate the actual fire conditions in fire hazard or risk. However, the results of this test method can be used as an evaluation of a particular fire hazard assessment of a variety of factors.

Document data

International classification (ICS): 13.300.

Chinese classification (CCS): A80.

Estimated length of the Chinese original: 10,111 words.

Adopted international standard: ASTM E659-1978 (2005), IDT.
