What this standard covers

This standard specifies the simultaneous determination of β_2 -agonist salbutamol in feed, ractopamine and clenbuterol liquid chromatography mass spectrometry (LC-MS) method. This standard applies to feed, concentrated feed and feed additive premix albuterol, determination of ractopamine and clenbuterol. This standard salbutamol, ractopamine and clenbuterol detection limits were 0.01 mg/kg, the limit of quantification of 0.05 mg/kg.

Document data

International classification (ICS): 65.120.

Chinese classification (CCS): B46.

Estimated length of the Chinese original: 7,769 words.
