Logistics Public Information Platform Application Development Guide Part 7. Service Management Platform

1 Scope

GB/T 22263.7-2010 is the Chinese national standard on application development guide of logistics public information platform - part 7: platform service management, in the field of information technology. The /T suffix marks it as a recommended standard: it is not

compulsory by itself, but it becomes binding as soon as a contract, a tender or a customer specification calls it up - which in practice is how most foreign buyers meet it. It was issued on 1 December 2010 by the General Administration of Quality Supervision, Inspection and Quarantine of the People's Republic of China; Standardization Administration of China, and has been in force since 1 May 2011. Classification: ICS 35.240.99, CCS L67. This page is published from the official record of the standard held by the Chinese standards administration: the identification, the dates, the classification and the issuing body are taken from there. The clause text, the tables and the numeric limits are in the document itself, which is delivered complete in English translation.

GB/T 22263 provisions of this part of the online logistics management services logistics public information platform, the platform of public services and systems Function management service descriptions. This section applies to industry, regional types of logistics public information platform for the planning, design, development and service.
