What this standard covers

This standard specifies the general low pressure sodium lighting performance requirements. The requirements given in this standard, see the relevant lamp " parameter table. " This standard includes the parameters of these lights. For the scope of this standard and other lights, the relevant parameters by the lamp manufacturer or reseller. The requirements of this standard relate only to type testing. Note: The requirements of this standard and tolerances are submitted by the manufacturer and type test sample tests conducted consistent. In principle this type of test sample shall have the typical characteristics of manufacturer's products consisting of a set of samples, and should be as close as possible to the center value of the product. It can be expected, the use of tolerances given in this standard and in accordance with the type test samples made ??products would meet the criteria for most products. However, due to the vast range of products, and sometimes there will inevitably exceed the specified tolerance value products. On sampling methods and in accordance with the characteristics of inspection guidance notes, see IEC 60410.

Document data

International classification (ICS): 29.140.30.

Chinese classification (CCS): K71.

Estimated length of the Chinese original: 27,276 words.

Adopted international standard: IEC 60192-2001, MOD.
