representation of References

Foreword

This revised standard adopts ISO 12615:2004 "after the term work in References and source identifier" is a special term for work to record, store and exchange information after the text refer to the national standard literature data information. The standard set in the recording project description format indeed Fixed, bibliographic references referring to aspects of GB/T 7714-2005.

This standard with ISO 12615. compared to 2004 mainly to do with the following modifications.

--- Reference to ISO 12615:2004, English, Chinese, minority languages, of other countries and their main responsibilities and titles the incumbent provides a source identifier coding principles;

--- Annex A (informative) comply with GB/T 7714-2005, appropriate reference ISO 12615:2004 Annex A (informative Annex Record), detailed the types of electronic documents, and an increase in notes items in the electronic bibliographic rules;

--- After the text in English and bibliographic references and bibliographic formatting rules are basically consistent with the GB/T 7714-2005, and ISO 12615:2004 a big difference;

--- Remove the ISO 12615:2004 "after the text in references 10" in the content.

The Standard Appendix A, Appendix B, Appendix C are informative appendices.

This standard by the National Standardization Technical Committee on Terminology and centralized.

This standard drafting units. China National Institute of Standardization.

Introduction

Recording, storing and after an exchange of relevant documents by reference data requires the use of a coherent description and coding methods. Extensive literature Archive criterion relates to matters closely related to this, but there is no standard for terminology work and terminology contained codification to detail begging. This standard is used to develop later reference method specified in GB 7714-2005.

GB 7714-2005 after compiling and editing the text for author references, and the development of the body after the article in references corresponding to an entry Citation information. An important part of the work is the term for subsequent application to extract, analyze and identify the contents of the literature terminology, identify the content the source document is the basis and foundation terminology workers identify the term content. After the 7714-2005 GB prescribed showing References Cited the method provides us with a certain amount of convenience, it can be applied in particular in terms of data compilation process.

This standard provides a detailed explanation of the terms and annotated in the working paper references sources of information, this representation later reference the simple test document coding system, both to ensure the complete bibliographic references, but also to avoid unnecessary duplication.

After the term working document references and source identifiers

1 Scope

This standard specifies the reference data elements used in terminology work later, after which the text references identifiers in computer terminology Application can be used as data category, or for recording bibliographic material attached to other text and list of references, and serials Information on the citation. The standards for different types of references and their use specified source identifier, illustrates how in References the data elements reflected in the source identifiers, and how to organize identification elements formed a unique identifier.

This standard applies to recording, storage and exchange of terminology work and terminology codification process later reference source of information, does not apply to FIG.

Librarian, bibliographies and indexes compiled by editors records and identification documents in Philology work.

This standard helps to.

- Identification, tracking and verification data and other terms of language resources;
- Contains terminological data cross-referenced documents;
- Networking terminology work and work in data flow management;
- Term data exchange;
- Technical literature write;
- Implementation of a term or terms codification project.

This standard does not consider that by adopting ISO 15836:2003 simple program requirements will be able to achieve.

2 Normative references

The following documents contain provisions which, through reference in this standard and become the standard terms of dated references, subsequent Amendments (not including errata content) or revisions do not apply to this section, however, encourage the parties to the agreement are based on research can you use the latest version of these files. For undated reference documents, the latest versions apply to this standard.
