What this standard covers

This standard specifies the method for determining the impact strength of the fabric to resist certain spray water permeability. By measuring the permeability of the fabric to resist water spray to predict the permeability of its anti- rain. This method can also be in the role of different spray water impact strength test on the fabric and draw a complete anti-permeability curves fabric. This standard applies to all kinds of water through and not been (or water repellent) finishing textile fabrics, especially for waterproof fabric with a strong performance.

Document data

International classification (ICS): 59.080.30.

Chinese classification (CCS): W04.

Estimated length of the Chinese original: 6,685 words.

Adopted international standard: ISO 22958-2005, MOD.
