What this standard covers

This standard specifies the requirements for measuring instruments, measuring instruments used to measure these reflection density and multicolor halftone or continuous tone printing copies of the material reflective tone value. In the application of this standard equivalent to the direct use of filters and techniques to measure the density of states limit the bandwidth of the measuring instruments, as well as spectral measurements and calculate the density of states of the measuring instruments. This standard does not apply to an instrument measuring continuous tone originals.

Document data

International classification (ICS): 37.100.01.

Chinese classification (CCS): A17.

Estimated length of the Chinese original: 16,130 words.

Adopted international standard: ISO 14981-2000, IDT.
