What this standard covers

This standard applies to products as well as special occasions selection of appropriate test methods and severities purposes. Damp heat test used to determine the electrical and electronic products primarily for high- humidity environment adaptability (irrespective of whether there is condensation), particularly in the electrical performance and mechanical properties change, can also be used to check the test sample withstand some corrosion.

Document data

International classification (ICS): 19.040.

Chinese classification (CCS): K04.

Estimated length of the Chinese original: 12,146 words.

Adopted international standard: IEC 60068-3-4-2001, IDT.

Supersedes the earlier edition GB/T 2424.2-1993.
