

ICS 25.040
CCS N 10

**NATIONAL STANDARD OF THE
PEOPLE'S REPUBLIC OF CHINA**

GB/T 25105.3-2025

Replacing GB/T 25105.3-2014

**Industrial communication networks - Fieldbus specifications -
Type 10: PROFINET IO specifications - Part 3: PROFINET IO
commuication profile
(English Translation)**

Issued on: April 25, 2025

Implemented on: November 1, 2025

**Issued by: State Administration for Market Regulation, China National
Standardization Administration**

Table of Contents

Preface	
Introduction	
1 Scope	
2 Normative references	
3 Terms, Definitions, Symbols, Abbreviations and Conventions	
3.1 Terms and Definitions	
3.2 Abbreviations	
3.3 Symbols	
3.4 Conventions	
4 CPF3(PROFIBUS	
4.1 Overview	
4.2 General	
4.3 Consistency Class Features	
4.4 Industry Rules 3/4	
4.5 Industry regulations 3/5	
4.6 Industry Rules 3/6	
4.7 Industry Rules 3/7	
4.8 Additional Information	
Appendix A (Informative) CPF3 (PROFINET) Performance Index Calculation	
A.1 Application scenarios	
A.2 Example of structures used for calculations	
A.3 Principles used in calculations	
References	
Figure 1.Consistency Class Model	
Figure 2 Terminal station and bridge system	
Figure 3 Bridge as a network component	
Figure 4 Wireless terminal station	
Figure 5 Wireless network components	
Figure 6 Hierarchical consistency class model	
Figure 7 Hierarchical consistency class model with integrated bridge component	
Figure 8 Hierarchical consistency class model - network components	
Figure 9 Example of a network topology using CP3/4, CP3/5, and CP3/6 components	81

Figure 10 Example of a network topology using CP3/4, CP3/5, CP3/6, and CP3/7 components 81

Figure 11 Example of network topology with wireless segment

Figure 12 Basic principles for calculating transmission time and RTE throughput

Figure A.1 CP3/4.Example of linear structure

Figure A.2 CP3/4.Example of a ring structure

Figure A.3 CP3/4.Example of a wireless segment

Figure A.4 CP3/4.Integrated wireless client example

Figure A.5 CP3/5.Example of a linear structure

Figure A.6 CP3/5.Example of a ring structure

Figure A.7 CP3/6.Example of a linear structure

Figure A.8 CP3/6.Example of linear structure

Figure A.9 CP3/6.Example of a ring structure

Figure A.10 CP3/6.Example of a tree structure

Figure A.11 CP3/6.Example of a comb structure

Figure A.12 CP3/6.Example of comb structure (optional)

Figure A.13 Definition of bridge delay

Table 1 Management number allocation

Table 2 Node classes and assigned traffic types

Table 3 Maximum diagnostic data of a submodule

Table 4 Maximum storage delay

Table 5 Report system minimum storage size

Table 6 Report system storage

Table 7 Reporting system timeout

Table 8 Maximum storage delay

Table 9 NME requirements

Table 10 Application classes applicable to IO device and IO controller consistency classes

Table 11 Application Classes Applicable to Network Component Conformance Classes

Table 12 Application class "isochronous application" AL service selection

Table 13 Application class "isochronous application" AL protocol selection components

Table 14 Application Class "High Availability" AL Service Selection

Table 15 Application Class "High Availability" AL Protocol Selection

Table 16 Basic application classes for "process automation"

Table 17 Application category "Process Automation" AL service selection

Table 18 Application class "Process Automation" AL protocol selection components

Table 19	Features supported by application class "high performance"
Table 20	Application class "high performance" parameter values
Table 21	Features supported by the application class "controller to controller"
Table 22	Application class "Functional safety" features supported by IO devices
Table 23	Application class "Functional safety" features supported by IO controllers
Table 24	Application category "Energy efficiency" AL service selection
Table 25	Application class "Energy efficiency" features supported by IO devices
Table 26	Application class "Energy efficiency" features supported by IO controllers
Table 27	Communication Class 20 for Conformance Class
Table 28	Communication performance parameters
