What this standard covers

This standard specifies the determination of moisture content in bauxite. This standard applies to the determination of the moisture content of the sample from the bulk bauxite (eg cabin materials and stacking) in the take. Appendix A of this standard specifies the sample since the adhesive or wet sieving and difficult, the crushing and separation methods used. In this case, the sample can be pre-dried until it can be processed smoothly until the water sample after pre-drying step according to Appendix A predetermined measurement. Appendix B provides for the delivery of bauxite encountered when watering and/or rainfall correction method. In the case of goods subject to rain and/or sprinkler control dust, moisture bauxite according to Appendix B for adding moisture to be corrected.

Document data

International classification (ICS): 73.060.40.

Chinese classification (CCS): H30.

Estimated length of the Chinese original: 11,132 words.

Adopted international standard: ISO 9033-1989, IDT.
