What this standard covers

This standard specifies test methods for liquid pollutants subject to intermittent action and at the same surface to withstand the stress of alternating insulating material performance comparison. With resistance to tracking and erosion tests comparing electrical material must be of the same kind of material, so the test results comparing different types of materials may not be fully effective.

Document data

International classification (ICS): 29.035.01.

Chinese classification (CCS): K15.

Estimated length of the Chinese original: 11,144 words.

Adopted international standard: IEC 61302-1995, IDT.
