What this standard covers

This standard specifies the method for the determination of aluminum in the production of calcined petroleum coke apparent oil content. This section applies to the determination of the production of aluminum forging apparent oil content of petroleum coke by heating. This section provides two measurement methods, namely: conventional measurement and simple measurement.

Document data

International classification (ICS): 71.100.10.

Chinese classification (CCS): Q52.

Estimated length of the Chinese original: 6,681 words.

Adopted international standard: ISO 6997-1985, IDT.
