What this standard covers

This standard applies to the determination of the amount of carbon residue of petroleum products after evaporation and pyrolysis left to provide petroleum coke products relative tendency indicators. This standard generally used easily in the atmospheric distillation partially decomposed, relatively less volatile petroleum products. Petroleum products containing raw ash components can (with GB 508 "Petroleum products - Determination of ash" determination) the amount of the size of the result will be high carbon residue value, the error depends on the ash has been generated.

Document data

International classification (ICS): 75.08.

Chinese classification (CCS): E30.

Estimated length of the Chinese original: 6,649 words.

Adopted international standard: ISO 6615-1983, NEQ.

Supersedes the earlier edition GB 263-1977; GB 268-1977.
