What this standard covers

This standard specifies the required conditions using standard samples evaluated by loading shear stress fatigue strength adhesive tensile shear test methods. Aim was to characterize structural adhesives in the performance of a specific metal substrates. Fatigue performance is a function of the specimen geometry. Test results and the intrinsic properties of the adhesive independent, and can not be used for design purposes.

Document data

International classification (ICS): 83.180.

Chinese classification (CCS): G38.

Estimated length of the Chinese original: 14,199 words.

Adopted international standard: ISO 9664-1995, IDT.
